

Bearing & Bush Co.

DRY BUSHES & WASHERS

Material

Composite bearing material consisting of 3 bonded layers: a steel backing strip bonded with a porous sinter bronze interlayer which is impregnated and overlaid with a polytetrafluoroethylene (PTFE)

Performance

Operating Temperature :- -200°C to $+280^{\circ}\text{C}$

Maximum Load :- 250 N/mm^2

Features

- Requires no lubrication
- Provides Maintenance free operation
- High oil capacity
- Exhibits low wear rate
- Seizure resistant
- High static and dynamic load capacity

- Good frictional properties with negligible stick-slip
- Resists solvents
- No Water absorption and therefore dimensionally stable
- Electrically conductive and shows no electrostatic effects
- Good embedability and is tolerant of dusty environments
- Compact and light
